SUMMARY

Software Engineering graduate who deployed Llama 3.1 on-premise for industrial fault management and built predictive maintenance models achieving AUC 98.5%. Trained and benchmarked 20+ CNN and ViT architectures with PyTorch and TensorFlow for medical and biological imaging. Published two peer-reviewed papers (ICSIS 2025), advanced to TEKNOFEST 2025 finals, and TUBITAK-funded researcher. Seeking an AI and ML Engineer role to apply hands-on experience in model training, edge optimization, and production deployment.

EXPERIENCE

Atasayar Teknoloji - Codlean | AI Engine Developer Co-op Duzce, Turkey | Feb 2026 - Jun 2026

- Built real-time SCADA data pipelines with **Apache Kafka + FastAPI**, reducing processing latency by **40%**
- Deployed **Llama 3.1 (8B)** on-premise; architected Multi-Agent decision system with 5 specialized AI agents
- Trained **XGBoost** predictive maintenance model (**AUC 98.5%**, 60 features); integrated SHAP and DLIME explainability, reducing unplanned downtime by **25%**
- Developed secure AI Gateway microservice (FastAPI): token auth, Gemini and Groq fallback, OpenAPI docs; 21-test pytest suite

Kriptarium | Software and AI Engineer Internship Elazig, Turkey | Aug 2025 - Oct 2025

- Benchmarked 20+ CNN and ViT architectures on DIBaS 33-class dataset using **PyTorch** and **TensorFlow and Keras**, achieving **95.45% top-1 accuracy**
- Optimized models for edge deployment via **ONNX Runtime, CoreML, TorchScript** - reduced inference time by **60%**
- Built companion Android app in **Kotlin and Jetpack Compose**; set up quality pipelines with JUnit, Espresso, Gradle CI

PROJECTS

Sa-Ra - Wireless Emergency Communication and Signal Processing Jan 2024 - Dec 2025

TEKNOFEST 2025 Finalist | TUBITAK 2209 Funded | Team Lead (3 people)

- Architected BLE and LoRa mesh network on **ESP32 (C, C++)** with CNN-based anti-jamming and adaptive modulation (BPSK, OFDM, GFSK)
- Developed iOS companion app in **Swift and SwiftUI**; configured **GitHub Actions CI and CD** pipeline + SwiftLint

Pharmora - B2B Pharmaceutical Exchange Platform Jan 2024 - Dec 2025

Solo Developer | Deployed on Railway

- Full-stack platform: **React + Node.js and Express + MongoDB**, containerized with **Docker**; integrated OpenFDA API
- Native mobile client in **Swift and SwiftUI** with XCTest coverage

GreenGuard - Smart Plant Care Analytics Platform Jan 2025 - Jun 2026

Solo Developer

- Desktop analytics with **C# .NET + SQL Server** for sensor anomaly detection; integrated **Groq API** for NLP-powered diagnosis

AWARDS AND ACHIEVEMENTS

- TEKNOFEST 2025 Finalist** - Wireless Communication and Signal Processing category (national competition)
- TUBITAK BiGG CUBE Shortlisted** - AI-driven entrepreneurship and commercialization program
- TUBITAK 2209-A Research Grant** - Funded undergraduate research project (Sa-Ra)

PUBLICATIONS AND OPEN-SOURCE

- "Lightweight CNN Models Outperform Vision Transformers on a Small-Scale Medical Imaging Dataset" - **ICSIS 2025**
- "An AI Model for Predicting and Generating LGS Exam Questions" - **ICSIS 2025**

EDUCATION

Firat University - B.Sc. Software Engineering | GPA: 3.00 out of 4.00 Sep 2022 - Jul 2026

Anadolu University - B.A. Business Administration (Distance) | In Progress Sep 2024 - Aug 2026

TECHNICAL SKILLS

AI and ML:	PyTorch, TensorFlow, Keras, XGBoost, Scikit-learn, Llama 3.1, RAG, Multi-Agent Systems, Hugging Face, ONNX, SHAP, DLIME, CoreML
Data and Analysis:	Pandas, NumPy, SQL, Feature Engineering, Data Pipelines, Exploratory Data Analysis
Languages:	Python, C, C++, Swift, Kotlin, TypeScript, C# (.NET)
Backend and Cloud:	FastAPI, Node.js, Apache Kafka, Docker, AWS EC2, PostgreSQL, MongoDB, REST API, Microservices
DevOps and Test:	Git, GitHub Actions, CI and CD, pytest, JUnit, XCTest, Espresso
Embedded:	ESP32, BLE Mesh, LoRa, SCADA
Methods:	Agile, Scrum, Jira, OOP, Computer Vision, NLP

CERTIFICATIONS AND LANGUAGES

- Deep Learning Specialization - Coursera (Andrew Ng) | Google AI and ML Crash Course - Google
- Languages:** Turkish (Native) | English (Upper-Intermediate)
